Our Process

My Travel Journal

Mobile App

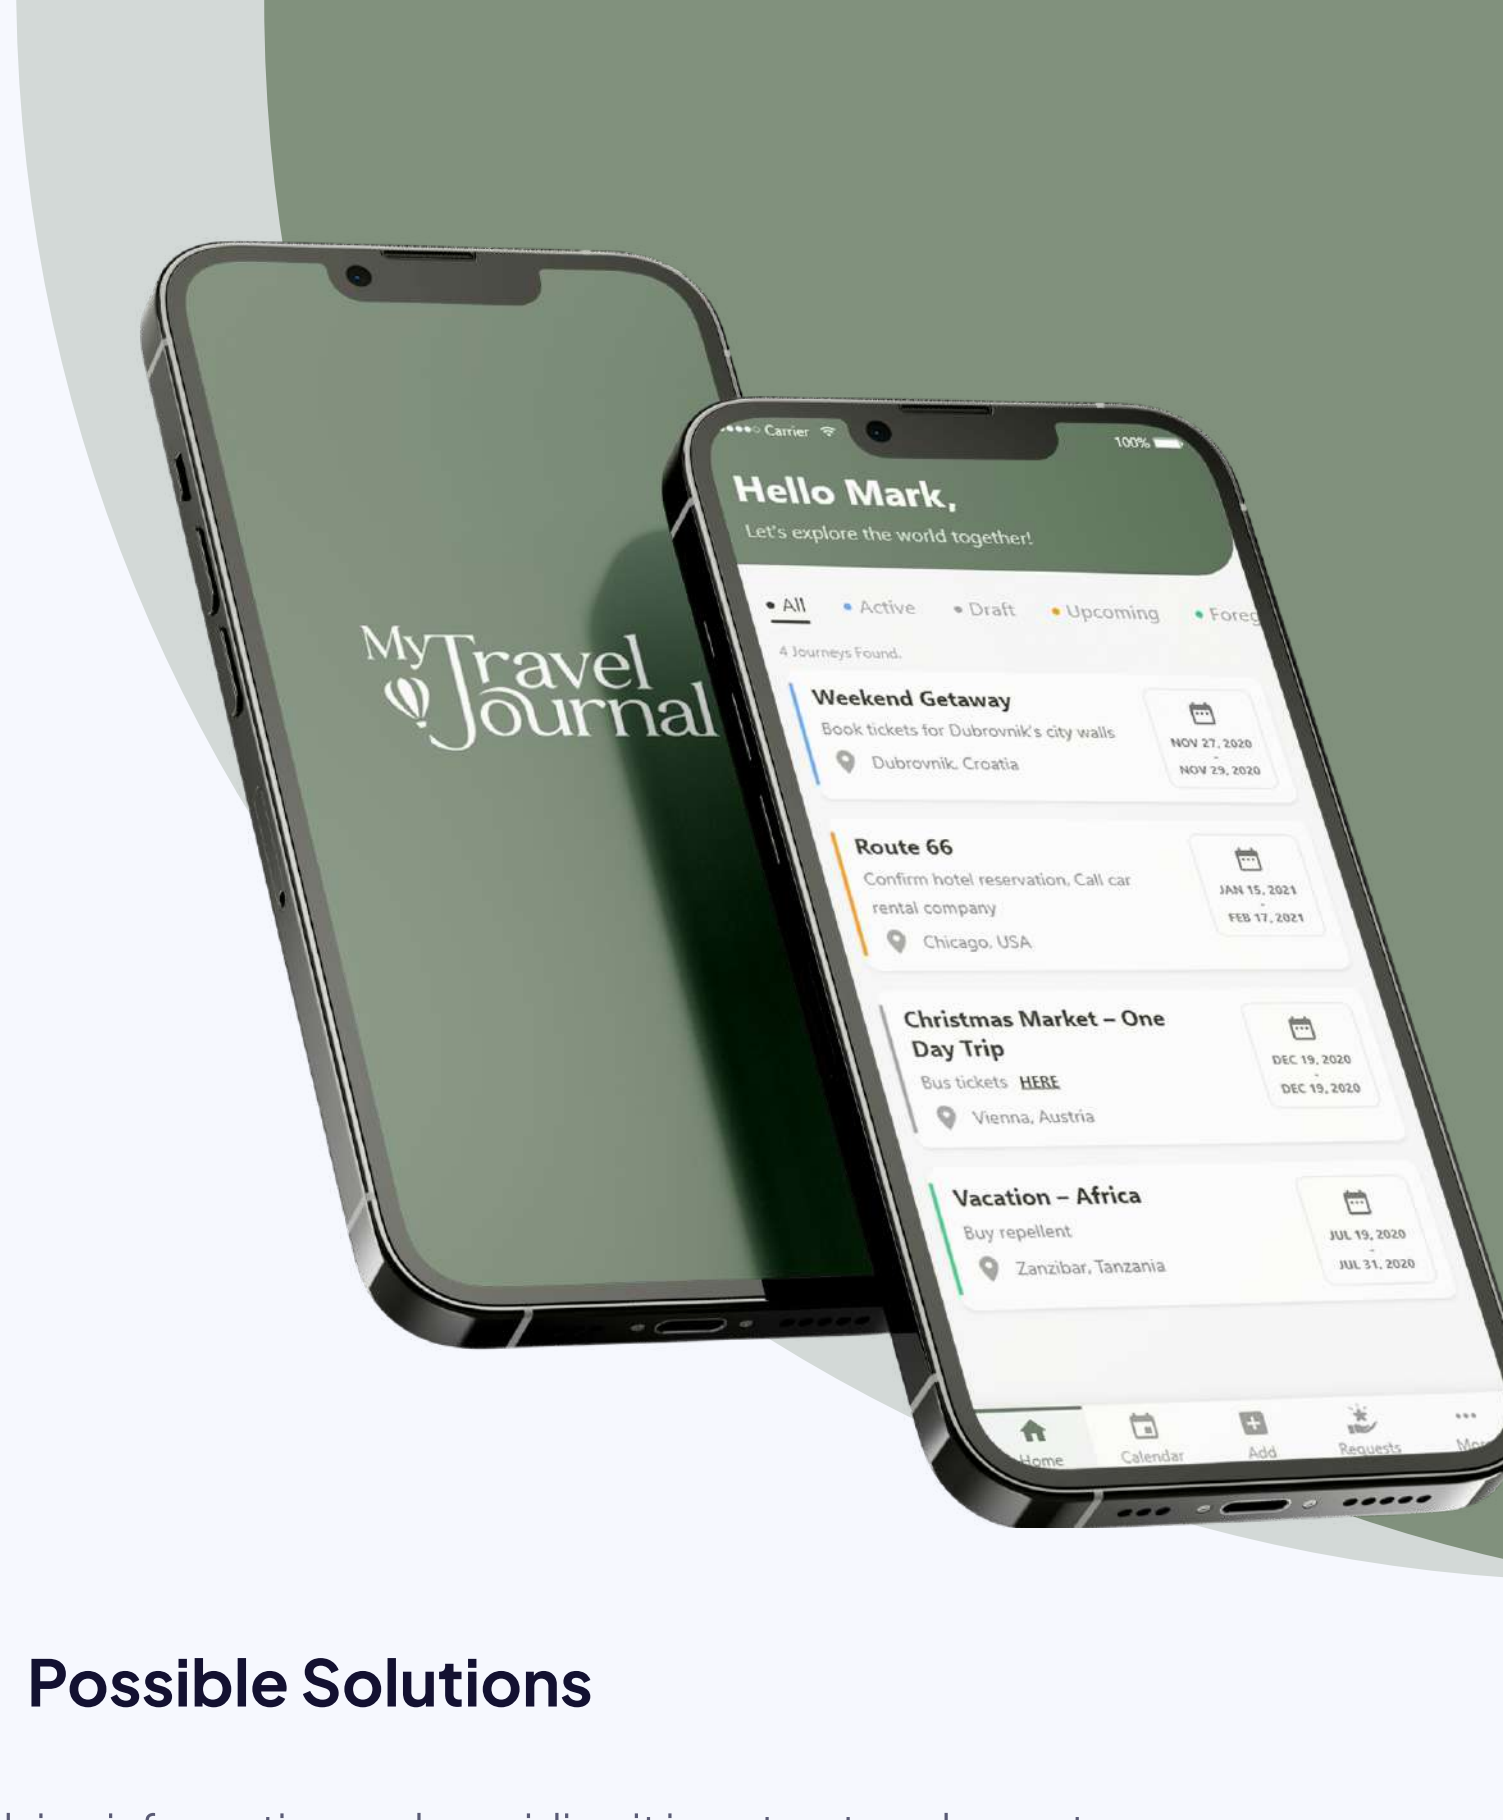

Roles

- User Research
- User Flow
- Visual Design

About Project

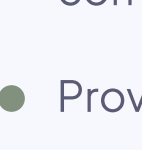

The My Travel Journal application is intended for travel planning and travel diary keeping for experienced travellers and beginner travellers.

<https://play.google.com/store/apps/details?id=com.mytraveljournal>

Problem Statement

- Existing design is outdated and not a user friendly
- Difficulty to organize all the necessary information for the trip in one place
- Spending a lot of time researching while planning the trip
- Difficulty to plan and schedule a trip on own
- Want to someone who can create personalized trip plan
- Expenses exceeding the budget

Possible Solutions

- Simplifying information and providing it in a structured way at one common place
- Providing personalized travel plans according to the user wishes
- Reminder of every activity and get to the location of the next activity during the trip
- Manage budget and keep track of all the expenses
- Save all photographs for the memories from the trip and keep a photo diary
- Making the process more comfortable and time-saving as possible for planning the trip

KansoCloud

Web

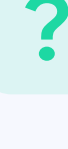

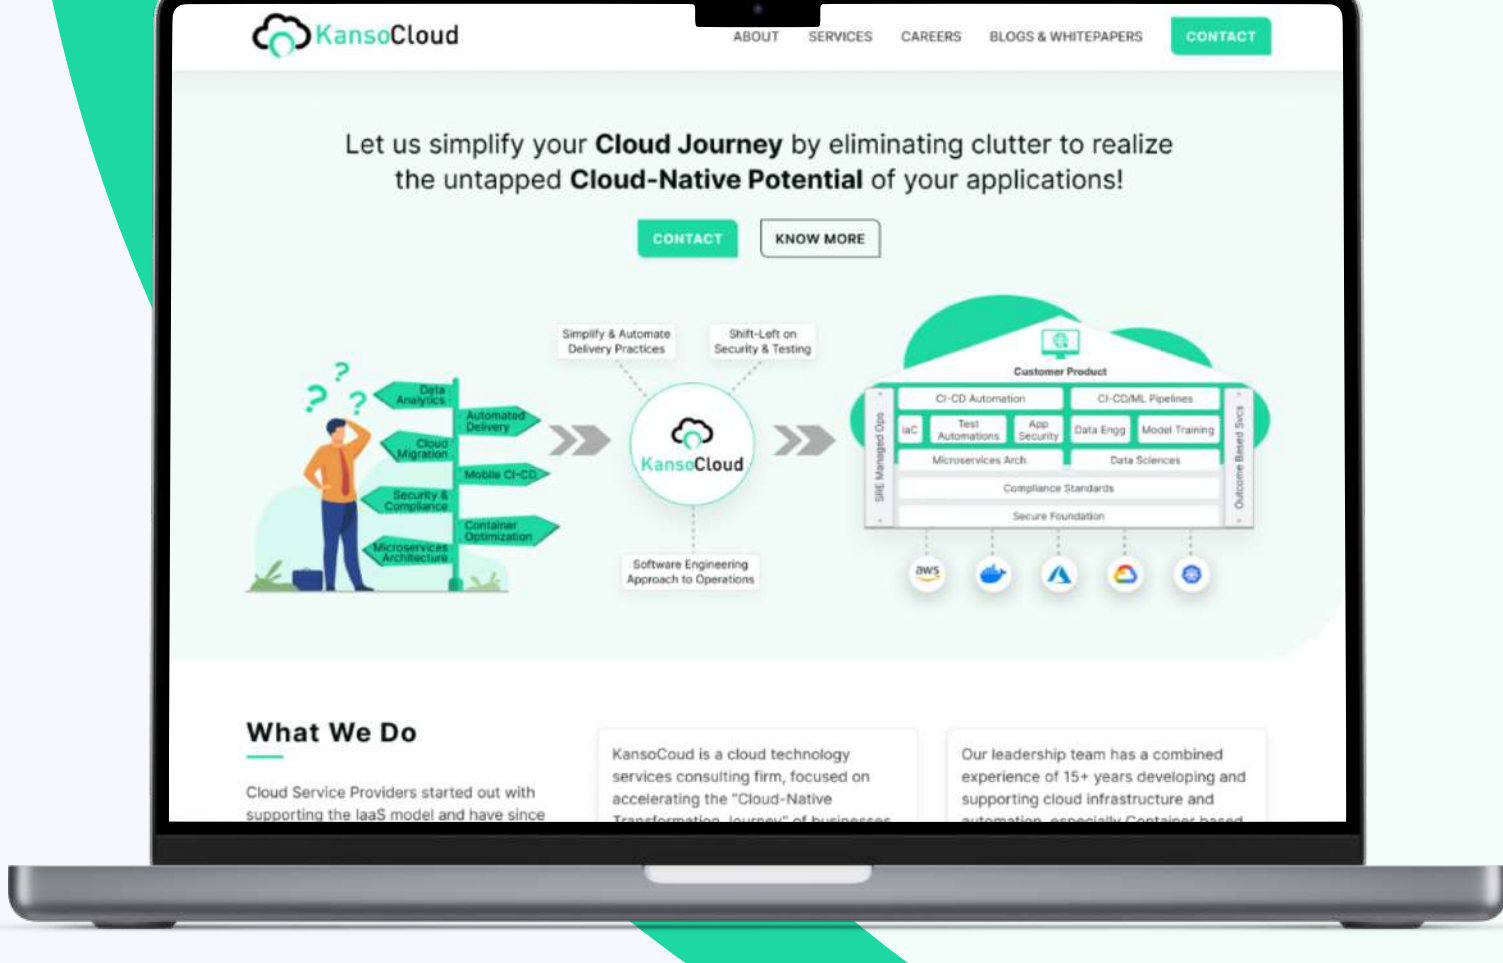

Roles

- UX Design
- UI Design
- Development

About Project

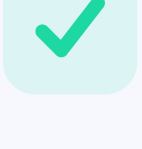

KansoCloud is a cloud technology services consulting firm, focused on accelerating the "Cloud-Native Transformation Journey" of businesses.

www.kansocloud.com

Problem Statement

Kansocloud's current site looks outdated. It's not a responsive site and does not provide a seamless across all devices. It has very far from user-friendly because of bad navigation and lack of information with accurate place.

Possible Solutions

We have tried to understand about company vision, goals, and services. We have followed a design thinking process. And created a wireframe design to order to define the right user interface which users find easy to use and pleasurable. We have worked in close collaboration with the client to match expectations and launch the marketing site.

Valet Parking

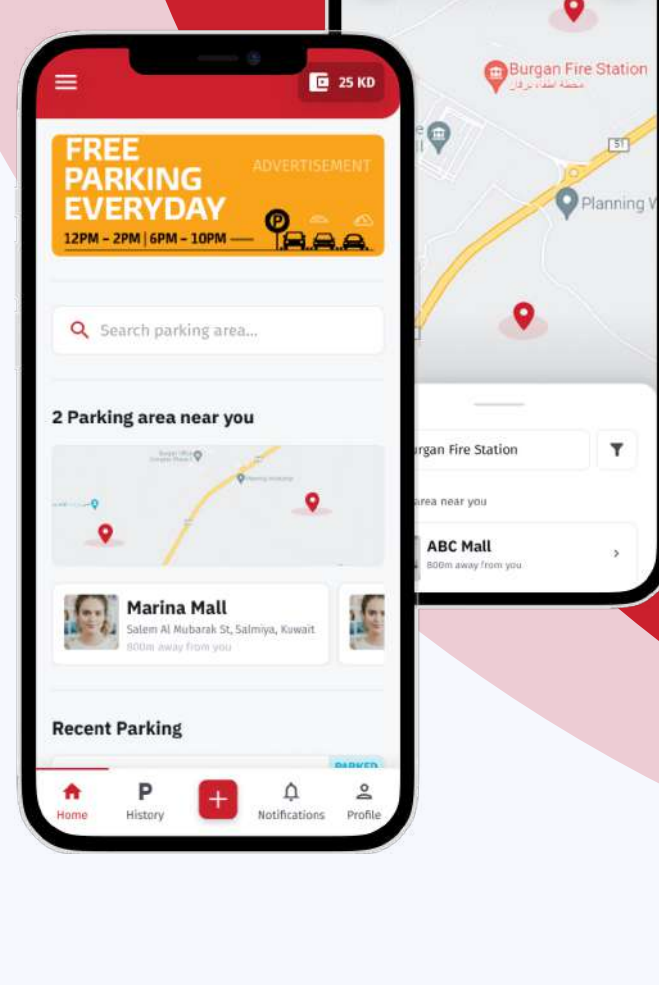

Mobile App

Roles

- UX Design
- UI Design

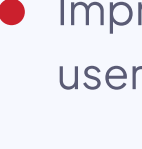

About a Project

Valet parking application provide a convenient and efficient way for users to park their vehicles in busy areas. This app can save users time and effort by eliminating the need to search for parking spots and walk to their destinations.

Problem Statement

- Valuable time wasted from inconvenient and inefficient parking lots
- Hard to memorize the parking number and locate the vehicle in a parking lot afterward
- Payment options are generally limited to cash and adding other options for transactions requires additional steps and infrastructure
- Paper parking tickets are easily damaged or misplaced

Possible Solutions

- Introducing new technology for tracking vehicles
- Improving the current valet parking system to make it more efficient, user-friendly, and cost-effective
- Make the user get to the parking booking process without any hurdles and assist the user with navigation
- Provide a high-quality valet parking service that is both efficient and enjoyable for customers

Sesshin

Web

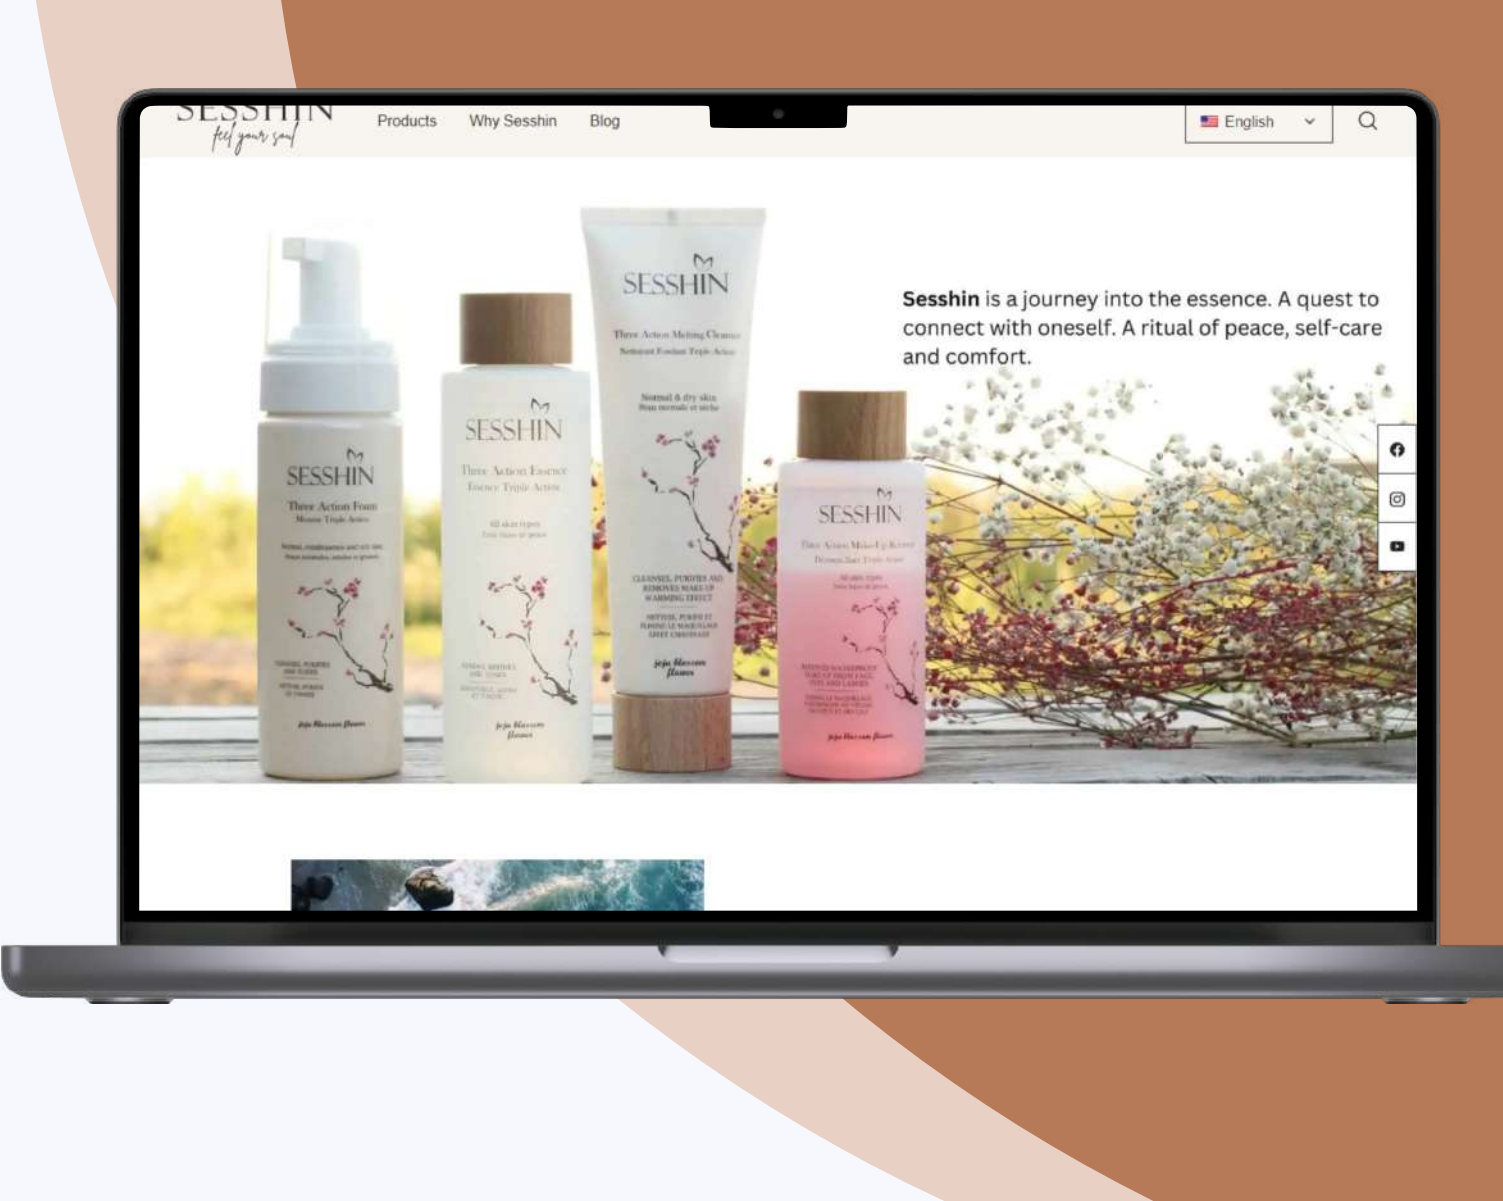

Roles

- UI Design
- Development

About Project

Sesshin was born with a clear purpose: to make your beauty routine a complete reunion of mind, body and spirit. Its color, scent and pleasant textures transport us to inspiring places, turning any moment into an opportunity for calm.

<https://sesshin.hk/>

Problem Statement

- Failed to provide good user experience about the products and services.
- Lack of visual hierarchy which directly or indirectly results affects business
- Outdated the site design
- No clear navigation

Possible Solutions

- Well-designed site structure should be intuitive and easy to navigate
- Built trust with the user or customer
- Improved site analytics
- Reduced the number of exist points

ZoopUp

Web & Mobile App

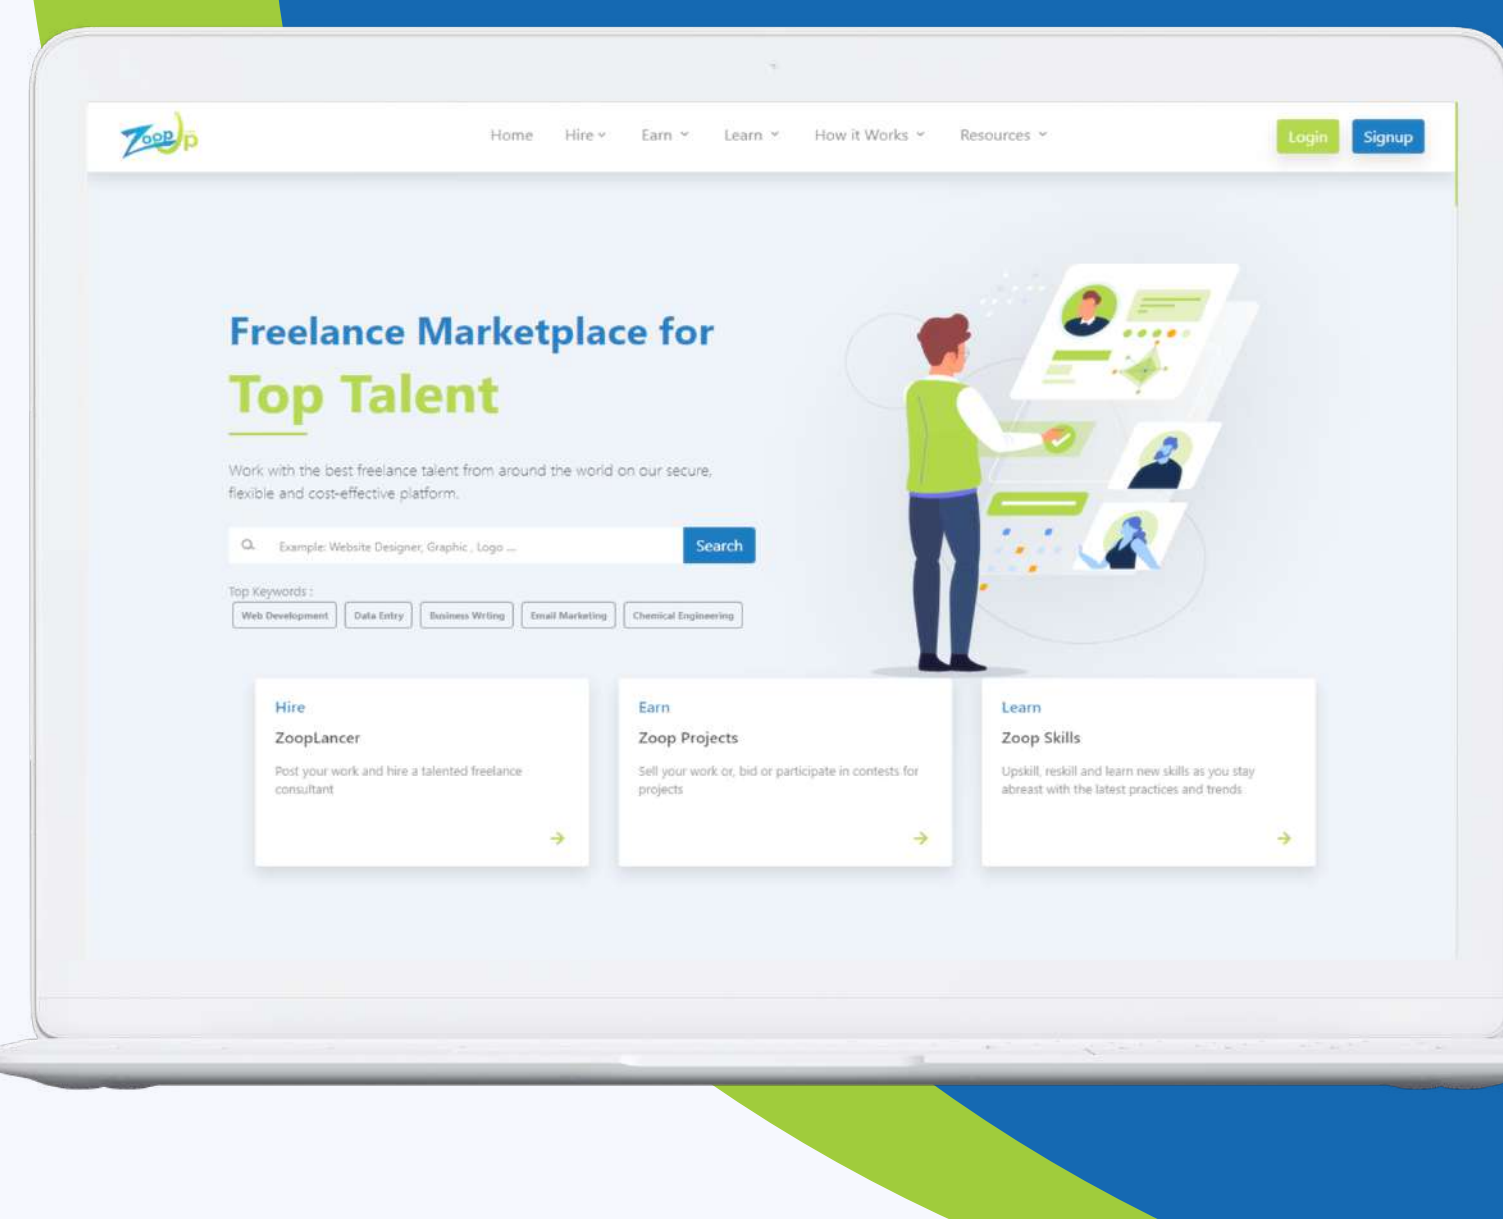

Roles

- UX Design
- UI Design

About Project

ZoopUp is the world's Learn & Earn marketplace, connecting millions of independent talents, independent talents with businesses around the globe.

<https://zoopup.com/>

Problem Statement

- Lack of recognition and trust among freelancers and employers
- Current design is outdated and not visually appealing
- Bidding process is also complicated, leading to frustration and lost opportunities
- Search and matching algorithms are not effective

Possible Solutions

- Modernized the site's design by incorporating contemporary design elements and ensuring a mobile-responsive design
- Improved the user experience by simplifying the bidding process, creating clear navigation paths, and ensuring a consistent user interface
- Improved our search and matching algorithms by using machine learning and AI techniques to better match freelancers with relevant job postings and employers with qualified candidates
- Increased trust among freelancers and employers by implementing a transparent payment system and dispute resolution process
- Personalized services to the users to enhance their experience

THANK YOU!
